Artifact

[Site]18ST233 __[Site Name]Webster Field __[Lot No]384 __[ArtifactNbr]
__[Provenience]Square (unit) 46851 __[Description]wood sample from grave
marker

Materials

wood

Detailed Description

wooden fragment for species identification:
Thin sections taken for microscopic examination:
Transverse: uniform sized tracheids, with resin canals.
Radial: pinoid cross-pitting
tangential: uniseriate rays.
All the above are definitely from softwood, suggestive of a hard pine, i.e.,
southern yellow pine. Also possibly a spruce.
